

Follow the steps below to connect your iPad to your home WiFi:

Step 1 Go into settings and find WiFi. Connect to your home WiFi and type in your home WiFi password.

Step 2 Find the **myOn** app on your iPad. Click on the app to open.

Step 3. The first time you open the app a box pop up saying “Authentication for HTTPS \proxy fp.palestineschools.org:8080” will appear. You will need to type in your school WI-FI username and password in this box.

Step 4 Once you have completed your password, click “Okay”.

You should only have to do this one time. If the box continues popping up, check that you are typing in your username and/or password correctly.

Please do not hesitate to contact Lindi Garner if you have any problems or questions about your username or password! You may also complete the technology help form on this website.
